Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by GB2003741.

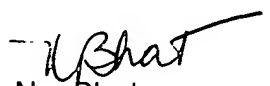

GB2003741 teaches a continuous vacuum pan crystallizer having particular application with respect to a method of sugar production and the refining of sugar. The vacuum pan crystallizer comprises a cylindrical vessel(10) in which there are a series of sector shaped cells (38-562) defined by partitions (22-36) which are functionally equivalent to the radially extending baffles defining a plurality of compartments located in series with one another, and further include ports or opening for communication between the compartments.[Note Figure 1 and Figure 2] Specifically the cells are substantially sector shaped and are disposed about a common center. Weir means are provided with a gate element for controlling the flow of the solution and crystallized solute for one cell to the other. A calandria is disposed within the liquid pan which includes a periphery, a bottom, a down comer between the periphery of the calandria and periphery of the liquid pan, with a gap between the bottom of the calandria and the bottom of the liquid heating pan.[Note the Figures and Page 1, lines 86-115] The apparatus as described and shown in Figures 1 and 2 fully anticipates applicant's claims as presently drafted.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. GB 585583 teach and improved process and apparatus for the continuous crystallization of sugar applicant is to note the Figures in reference, the vacuum pan includes the baffles and orientation of the crystallizing apparatus and this reference fairly suggests applicant's invention. Rein teaches a continuous pan crystallizer. Dye teaches an improved evaporation process for accomplishing the separation of a solution into its volatile and nonvolatile components.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to N. Bhat whose telephone number is 571-272-1397. The examiner can normally be reached on Monday-Friday, 9:30AM-6:00PM.
